

Bhramari Pranayama

The Bee Breathing Technique

What is Bhramari Pranayama?

Bhramari Pranayama, also known as Bee Breathing, is a simple yet powerful breathing technique from yoga. The name comes from "Bhramari," which means "bee" in Sanskrit, as the practice creates a gentle humming sound similar to a bee's buzz.

This calming practice helps quiet the mind, reduce stress, and bring inner peace. It's perfect for beginners and can be done anywhere, anytime.

Important Precautions

Pregnancy

Not recommended during pregnancy or menstruation

Health Conditions

Avoid if you have severe heart problems or high blood pressure

Ears & Throat

Do not practice with ear infections, throat issues, or during colds

Post-Surgery

Wait at least 4 weeks after any surgery before attempting

Always consult with a yoga instructor or healthcare provider if you have any medical concerns.

Getting Ready

Find Your Space

Choose a quiet, comfortable place where you won't be disturbed. Sit on a yoga mat or cushion with good support.

Comfortable Position

Sit in a comfortable cross-legged position like Sukhasana (Easy Pose). Keep your spine straight but relaxed, shoulders down.

Time of Day

Best practiced in the morning on an empty stomach, or in the evening to calm your mind before sleep.

Step 1: Settle into Position

01

Sit Comfortably

Choose Sukhasana (Easy Pose), Padmasana (Lotus Pose), or sit on a chair with feet flat on the floor

02

Align Your Spine

Keep your spine straight and tall, but don't strain. Let your shoulders relax naturally

03

Close Your Eyes

Gently close your eyes and take a few natural breaths to center yourself

Step 2: Position Your Hands

The Hand Position

Bring your hands up to your face. Place your index fingers gently on your temples.

Fold your remaining fingers and rest them naturally on your forehead. Some practitioners prefer to cover their ears with thumbs while keeping other fingers on the forehead.

Apply very light pressure—just enough to feel the contact without pressing hard.

Step 3: Inhale Deeply

Breathe In

Take a slow, deep breath through your nose

Fill Your Lungs

Inhale until your lungs feel comfortably full

Pause Briefly

Hold the breath for a moment with awareness

Step 4: Hum Like a Bee

Creating the Sound

As you slowly exhale through your nose, make a steady, low-pitched humming sound. The sound should resemble a bee's gentle buzz.

Feel the vibration in your throat, chest, and head. The sound should be smooth and continuous, not forced or strained.

Duration

Exhale for 4-6 seconds while humming. Start with 5-7 rounds and gradually increase as you become comfortable.

Benefits of Bee Breathing

Mental Calmness

Reduces anxiety, stress, and mental agitation. Promotes inner peace and clarity

Heart Health

Lowers blood pressure and calms the nervous system for better cardiovascular health

Better Sleep

Helps relieve insomnia and promotes restful, quality sleep when practiced evening

Voice Quality

Improves vocal cord health and enhances voice quality with regular practice

Headache Relief

Reduces tension headaches and migraines through calming vibrations

Emotional Balance

Controls anger and helps manage emotional responses throughout the day

Thank You

Practice Bhramari Pranayama regularly to experience its calming benefits. Start with a few rounds daily and gradually increase. Remember to be patient with yourself—peace comes with consistent practice.
